Marwah Hayat (251201017)

Maryam Ejaz (251201036)

Submission Date: January 4, 2026

1. Introduction

Central Bites is a responsive food guide website developed for the Semester Project of DS-02 Application of ICT Lab. The purpose of this project is to help users easily find restaurants, see their ratings, and decide where to eat based on real-time status and preferences. The website works seamlessly at the desktop.

2. Project Description

Central Bites displays a list of restaurants as interactive cards. Each card provides a visual and data-driven summary of the dining location.

Additional Features include:

- **Search Bar:** Users can type in a restaurant's name to filter results instantly.
- **Mood Filters:** Buttons (e.g., Family Dinner, Quick Snacks) help narrow choices by category.
- **Spin the Plate:** A unique button that randomly selects a restaurant for indecisive users.
- **Status Badges:** Color-coded indicators (green for OPEN, red for CLOSED) based on the current system time.

3. Website Structure

The website is built as a single-page application focused on user experience:

- **Header:** Features the "Central Park Vibe Guide" branding and title and contains the search input container.
- **Navigation & Search:** Contains links of other web pages.
- **Restaurant Gallery:** The main section displays all restaurant entries dynamically and includes the "Spin the Plate" feature.
- **Interactive Footer:** Includes the links of social media platform and group member details.

4. Technologies Used

- **HTML5:** For web page structure and semantic content.
- **CSS3:** For layout and Styling.
- **GitHub & GitHub Desktop:** For version control and team collaboration.
- **GitHub Pages:** For hosting the live version of the website.
- **Visual Studio Code:** The primary code editor used for development.

5. Project Management

We organized the project using a GitHub Project Board to track tasks in real-time. The board consisted of three main columns:

- **To Do:** Initial planning and task ideas.
- **In Progress:** Active development and coding tasks.
- **Done:** Completed features, bug fixes, and final testing.

- **Project Board:** <https://github.com/users/iharisrao/projects/4>

8. Conclusion

Central Bites is a user-friendly and responsive food guide web application that helps users explore nearby restaurants and quickly decide where to eat. Through this project, the team gained valuable experience in front-end web development, version control using Git, and professional project workflow practices.
